

Handshake.Logic 'Area Maximum Check'

Always well informed –
on site right at the checkpoint.

Quota management

- **Always be informed:** Messages will inform you when a limit is reached. Live Reports show you the percentage of the occupancy rate for your venue.

Versatile

- **Limits for certain ticket categories:** User-defined counters allow limits for specific ticket categories. Automatically created system counters can control limits.

Even more security

- **Automated stop:** The checkpoints will stop automatically, when the maximum of people allowed in is reached. The count is done automatically during the ticket check.

Easy of use

- **Simple resetting of counters reached:** Reset the counter by one simple mouse click, e.g. in the Handshake.Logic 'Mobile Monitor', a keystroke on the Handheld.Gate 'Soft Pinpad' or by using a control card directly at the checkpoint.

Properties

Functions

- Graphical user interface
- Displays automatically created system counters
- Limits for automatically created system counters
- Displays user specific counters for counting special tickets, e.g. Adults
- Limits for user specific counters for special tickets, e.g. Adults
